ABOUT THE PROGRAM

Internet of Things is the inter-networking of physical devices, vehicles, buildings, and other items, embedded with electronics, software, sensors, actuators, and network connectivity that enable these objects to collect and exchange data. By learning the inter-connection and data exchange, Students can create their own IoT Networks with connected devices and can access it from anywhere in the world.

This course will provide the participants knowledge and experience on the fast growing field of IoT. Cyber Security touches nearly every part of our daily lives. We rely on vast array of networks to communicate, power our homes, run our economy, and provide government services. However Cyber intrusions and attacks have increased dramatically over the last decade, exposing sensitive personal and business information, disrupting critical operations, and imposing high costs on the economy.

The nation has a significant shortage of Cyber Security professionals who can understand and effectively thwart the growing threats. As a result, education and training in Cyber Security and Internet of Things has become a priority.

The central role that IoT plays in the technology world and the growth of IoT devices is an undeniable fact. IoT is bringing the network to our daily lives – our cars, utilities, homes etc, and extending its reach to cities, industries and more.

With such influence, IoT security is definitely a key concern for the entire industry of IoT stakeholders, spanning developers, service providers, customers, and end-users. This course outlines the state-of-the-art prevailing practices for IoT Security and explains how this topic is evolving.
